

## Wireless Thermoblue® Press Release

Cappec Wireless Thermoblue® Bluetooth Temperature and Humidity Weather Station Brings Connectivity to New Spaces

In a world where the expectation is for more and more parts of the home to be wireless connected for added control and comfort, Cappec has created a new product category with the release of their innovative Cappec Thermoblue Wireless Smart Thermometer. Customers have greeted the product with enthusiasm.

January 12, 2015

For an ever-increasing number of people a connected home is a happy home. Cappec, an innovative company that specializes in home technology, has recently done their part in helping bring Bluetooth connectivity to an area, which hadn't seen it before, the home thermostat. Enter the Cappec Thermoblue Bluetooth Wireless Temperature and Humidity Weather Station, an exciting and affordable home improvement that connects the thermostat to Bluetooth enabled smart devices. This allows users to check their home temperature right on their iPhone, iPad or Android adding extra comfort and connectivity to an area that was sorely lacking.

"As a young and dynamic company we are aware that we and our customers require smart technology products," commented K. Tsui, CTO of Cappec. "Everything is being monitored on handheld devices nowadays, and what easier way to monitor closed environments, your patio, your wine cellar, your cigar humidor or simply your living room with a device that connects wireless to your smartphone? With Thermoblue anyone can review, monitor and get alerts on their current temperature and humidity directly on the iPhone, iPad or Android."

According to the company, the Thermoblue can be placed indoors or outdoors safely and can operate at up to 50-100 feet in open range. Up to four sensors can be connected at one time.

Early users of the device have been quick to give the wireless temperature and humidity weather station very positive feedback.

Emily P., from New York, recently said, "My husband and I are both really into technology and love the idea of wireless connecting as much of our home as possible. It's both fun and functional, so we were very excited to hear about Thermoblue. We weren't disappointed. The weather station works really well with our iPad and all the functions it lists are both interesting and helpful. We'll be getting a second to put outside soon too. Five stars and fully recommended."
